

Special session specifications:

Data mining and Cyber Technologies

Chaired by:

Professor Joan Lu¹ & Professor Malgorzata Pankowska²

¹School of Computing and Engineering, University of Huddersfield, UK

²University of Economics in Katowice, Poland

Objective

Data mining plays a special role in analytic knowledge discovery and decision making process. Cyber Technology has revolutionized the interpersonal communication. This session aims to address the significance and contributions from both cutting age technologies related to data mining and cyber technologies.

Covered Topics

Large spatial datasets

Big data analytic tools,

Big Data methods

Big data algorithms

Cyber technologies

Reasoning and proposing of newer models for better understanding of the socio economic

Impact of the pervading access to internet on mobile channels.

Data in complex systems

Security Applications

Cyber Security

Pattern matching and reasoning techniques

Anomaly detection techniques

Intrusion detection and auditing

The accepted papers will be published in the relevant journals in the subject area as special issue (see conference websites).
